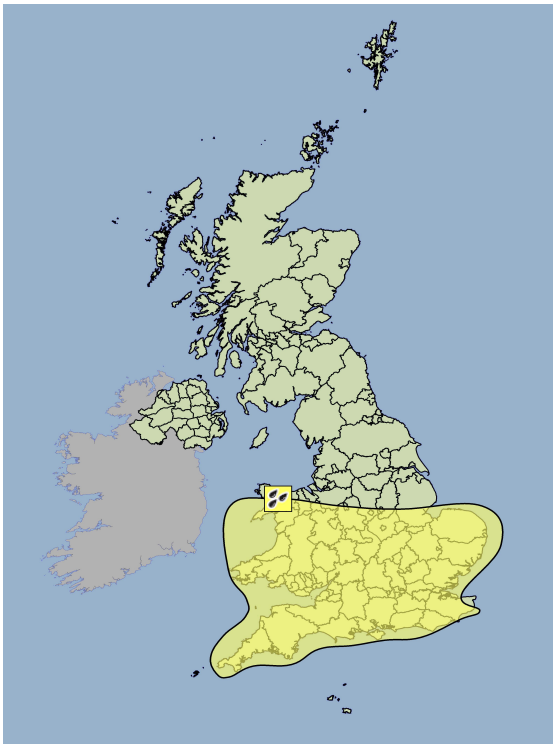
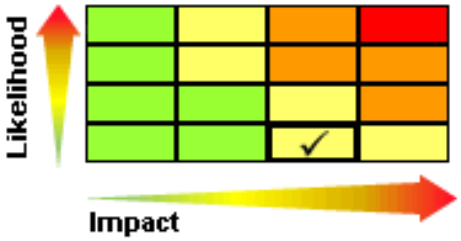
National Severe Weather Warning Service





Chief Forecasters Assessment
A warm and humid airmass covers southern Britain at present. This is already becoming increasingly unstable and producing a few thunderstorms through Thursday, but these are expected to become more widespread overnight into Friday and extend further north into the Midlands and Wales.

Many place will miss the worst of these - some may stay dry - but where they do occur, 20-30 mm rain may fall in a short time, leading to some surface water flooding, whilst lightning and hail may be additional hazards.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **05:30 on Fri, 19th Sep 2014** until **23:45 on Fri, 19th Sep 2014**

Heavy showers and thunderstorms are likely to continue northwards on Friday morning - the risk then continuing through the rest of the day. Many places will miss these but the public should be aware of the potential for isolated disruption due to surface water flooding, lightning strikes and hail.
